

REAL EARTH ELEMENTS

An Enterprise Backed Token

**Markets are
volatile**

The macro
environment is
uncertain

**Investors are
searching for yield**

The REE Token

Stake REE – Receive **dividend payments**

Token **backed by the real world asset**
of mining profitability

We are already mining

Our Mines

Asia – Philippines

Our partners hold operating rights over more than 1,700 hectares of gold, silver, copper and iron ore mine concessions, and are operational on the islands/provinces of Mindanao, Bohol and Quezon in the Philippines.

Infrastructure upgrades will allow a smoother extraction process, and are scheduled for the end of 2026 and into the beginning of 2027. The mines will be transformed from artisanal to the level of Scalable Boutique Mining. With targeted investment, all the mines BiField works with will be upgraded by third quarter 2027. If our partners can be operational, expansion and mechanization will increase both production and profitability.

We intend to replicate our current efforts throughout the Philippines.

South America – Chile

Operating in a holding pattern: Used when an organization is intentionally maintaining its current status without advancing or investing resources.

Why Gold?

Gold is important to the planet's green transition because its chemical durability allows it to be infinitely recycled without degrading, reducing the need for new mining. Additionally, gold acts as a high-efficiency nanoscale catalyst used in green technologies to convert carbon dioxide and build renewable energy infrastructure.

Moreover, gold remains vital to the global economy because it acts as a trusted safe-haven asset, a reliable hedge against inflation, and a foundational reserve asset for central banks.

Why Silver?

Silver is essential to the green transition because it possesses the highest electrical and thermal conductivity of any metal, making it an irreplaceable component in solar panels, electric vehicles (EVs), and modern renewable power infrastructure.

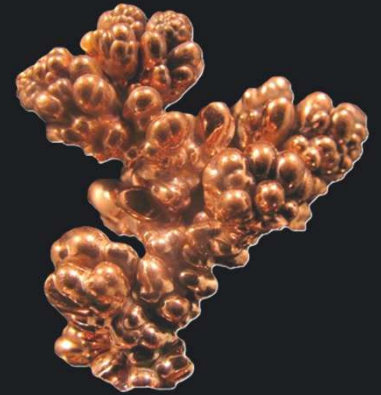

Silver operates as both a critical industrial commodity and a traditional precious store of value. Roughly 55% to 60% of annual silver demand comes from industrial manufacturing, driven by its unmatched electrical conductivity, thermal efficiency, and antimicrobial qualities.

Why Copper?

The price of copper is stable and poised to rise on the back of its use in various industries, especially the EV (electric vehicle) sector, where four times more copper is used than in the production of traditional automobiles. This one industry alone will propel the demand for copper for years to come as the world transitions to EVs.

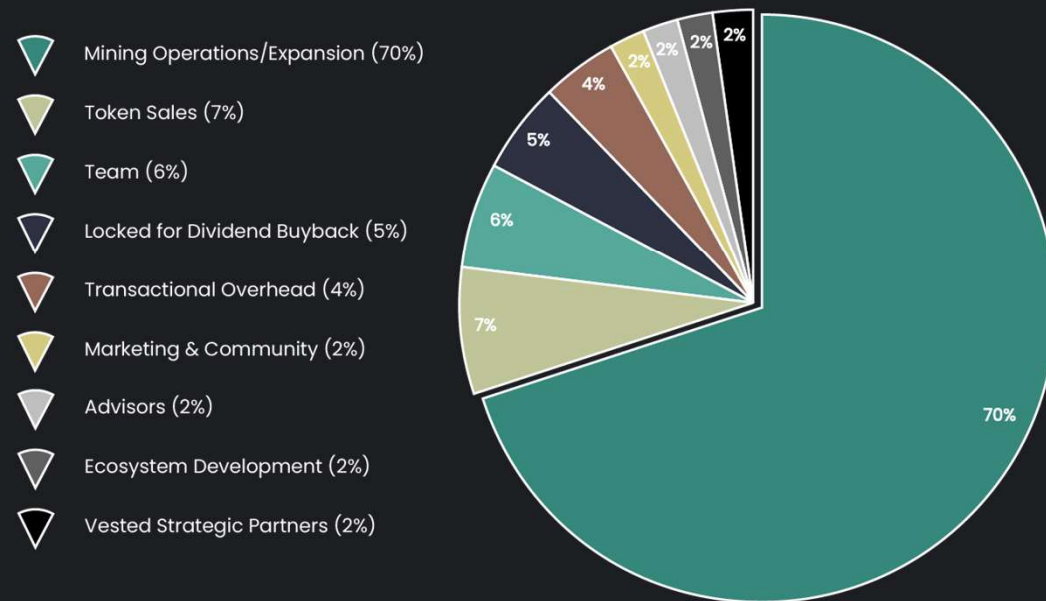

Copper is a mineral and an element essential to our everyday lives. It is a major industrial metal because of its high ductility, malleability, thermal and electrical conductivity and resistance to corrosion. It is an essential nutrient in our daily diet and its antimicrobial property is becoming increasingly important to the prevention of infection.

Tokenomics

1. Purchase REE – up to 30% discount.
2. Stake your tokens, receive dividends.

Token Allocation

Total Supply – 750,000,000

*See White Paper for more details on use of funds and token mechanisms
